REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

No prior art of record or combination thereof teaches a magnetic device comprising a magnetic core; and springable winding having a terminus and a longitudinal axis wherein the springability is rotational and tending to rotate said terminus around said longitudinal axis, the springable winding positioned about at least a portion of the magnetic core and the springability further biasing the terminus against an underside of the magnetic core.

Closest related art found was U.S. Patent Number 4,814,735 to Williamson. Williamson discloses a winding for a magnetic core device wherein the device comprises a core, interleaved coils which are compressed (inherently springable); coil terminals which are biased about an inside of the core. HOWEVER, Williamson does not disclose the biasing of the terminals against an UNDERSIDE of the core. As disclosed by the applicant, this structure (terminals against an underside of the core) is for a specific purpose. See specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
